

# Blinder R-150

## **SUPER BRIGHT:**

Producing a powerful 150 Lumens, the R-150 is bright enough for use day or night in any riding conditions.

## **CHIP ON BOARD LED'S & SIDE ILLUMINATION:**

Fitted with advanced COB LED technology means, the R-150 produces a superbright and consistent beam of light covering a wide area.

The COBs wide beam angle, in addition to lens geometry specifically designed for side illumination, allows for 200 degrees of visibility.

## **DEDICATED STROBE LED:**

The R-150's exceptional visibility is also aided via a dedicated high-powered strobe LED on its own channel. This allows the strobe element of this light to operate independently from the rest of the LEDs.

Finally, with the strobe LED focused optic set at an angle of 12°, it means that even when mounted on a seat tube, the R-150 strobe is pointing in the right direction (parallel to the road) to maximise visibility at long distances.

## **MULTI-CHANNEL LEDS & SPECTACULAR FLASH PATTERNS:**

Through its use of advanced COB LED technology and seven dedicated lighting channels, the R-150 is able to produce arresting visual patterns that are almost impossible to miss. Wide-beam COB and focused Strobe LED combined with high output, and eye-catching patterns means this light is highly visible when used in day or night.

## **LIGHT WEIGHT:**

Weighing just 40 grams this is lightweight in all the right ways.

## **8 MODES:**

The R-150 has eight modes to choose from, including: a 50hr runtime, so whether you are looking for the longest run time or the most eye-catching light pattern, the R-150 has a range of options to pick from.

## **100% WATERPROOF:**

With an IP67 rating, this light can be submerged in 1 meter of water for 30 minutes and still come out shining.

## **CONVENIENT USB RECHARGING:**

Recharged via integrated USB-A means there is no requirement for single-use batteries or charging cables. Recharged from flat in three hours.

## **CHARGE INDICATOR:**

Convenient LED around the on/off button glows green whilst the light is charging and turns off when light has achieved full charge capacity.

## **LOW BATTERY INDICATOR:**

No need to guess when your light needs to be recharged. With a convenient LED that lights up red around the on/off button when your light dips below 10% of remaining charge.
