

# Frog

## COB LED TECHNOLOGY:

Taking cues from some of Knog's most technologically advanced lights, Frog now features advanced Chip on board (COB) LED technology. This allows Frog to create high-intensity light in a compact and low-profile light. Producing 40 lumens for the front light and 20 for the rear. These lights are powerful enough for everyday commuting or as a complement to your existing lighting set-up.

## ADVANCED SIDE VISIBILITY:

Another benefit of the COB technology is that it allows the LED's to be arranged on a curved board. This means that light is emitted from the sides of the light greatly adding to the side visibility of the light and the additional safety this affords the rider.

## ONE BUTTON OPERATION:

One large, easy press button makes the operation of these lights super simple, even in gloves.

## USB RECHARGEABLE:

This is the first Knog light ever that is rechargeable; simply plug it into a USB C to charge. A full charge is achieved in just 3 hours.

## 100% WATERPROOF:

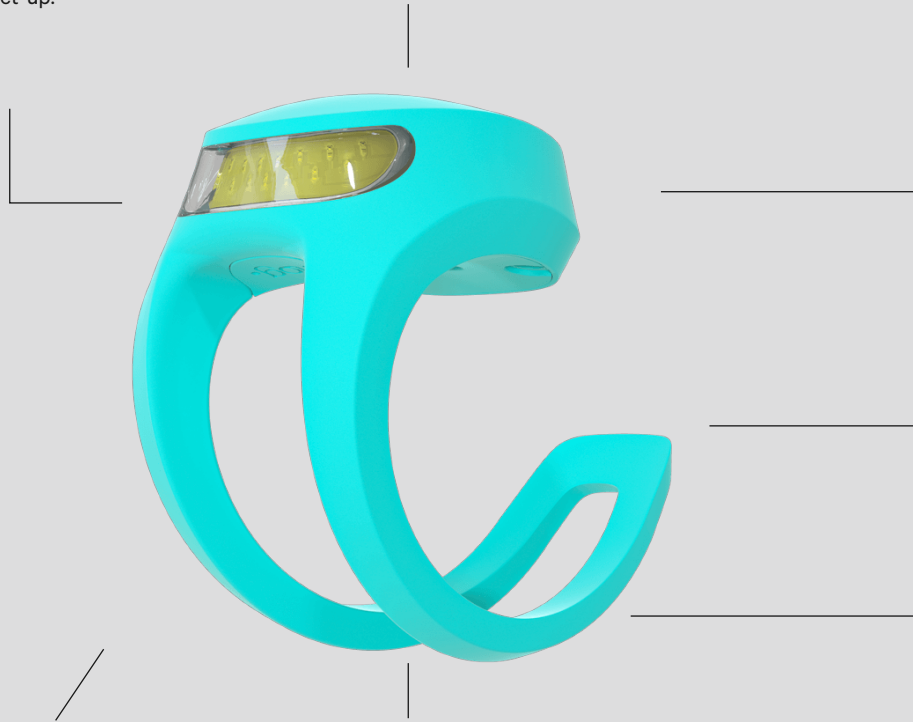

With an IP rating of IP65, these lights keep on shining whatever the weather.

## MULTIPLE MODES:

9 modes to choose from.

## LONG LASTING:

With up to 50 hours between charges, you'll have light whenever you need it.

## INTEGRATED FLEXIBLE MOUNTING SYSTEM:

With no tools required to mount the light and featuring an integrated strap & flexible body, Frog is easily mounted anywhere on your bike, your helmet... wherever.

## COMPACT LIGHTWEIGHT DESIGN:

Weighing in at just 20g and with a streamlined and compact design, Frog can be mounted on even the most cluttered bike's cockpit without interfering with its operation.

## RUNTIMES

REAR

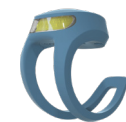

MODE	LUMENS	RUNTIME HRS
